jd-apprentice | Jonathan D. | @dyallo

Summary

With **over 5 years of experience** in this field, I possess a strong working knowledge of operations. My background includes various, mostly **cross-functional roles**, which has equipped me with an **excellent analytical ability** and a comprehensive understanding of the **entire business**, not just the technical aspects.

Experience

ITTI
Senior Application Security Engineer (Full-Time)
Buenos Aires (Hybrid)
June 2025 - Present

Security by Design at Scale: Spearheaded security architecture definitions for **45+ organizations**, ensuring seamless integration of security controls from initial design to production for all new corporate products and features.

Strategic Technical Partnership: Acted as a key technical consultant **across 15 agile squads**, transforming complex security requirements into actionable technical roadmaps during high-level architecture meetings.

Security Guardians Program: Co-founded and scaled a grassroots security advocacy program, embedding best practices **directly into development cycles** and significantly reducing friction between Security and Engineering teams.

Multi-Agent Systems (MAS) Orchestration: Architected and deployed **AI Multi-Agent frameworks** to automate complex security workflows. This initiative autonomously filtered SCA and SAST **false positives**, drastically reducing developer "alert fatigue" and optimizing remediation windows by **30%**.

Intelligent Process Automation: Leveraged Large Language Models (LLMs) to automate the generation of context-aware remediation guides and to standardize security responses across diverse programming environments.

Internal Tooling & MCP Ecosystem: Developed a suite of custom security tools and **Model Context Protocol (MCP)** servers. By building specialized **Skills** for internal use, I bridged the gap between LLMs and our private infrastructure, optimizing the developer experience and system interoperability.

Global Pipeline Governance: Maintained and optimized centralized security pipelines via **GitHub Actions**, enforcing compliance and continuous scanning across a massive footprint of **6,000+ repositories.**

Vulnerability Lifecycle Management: Executed a comprehensive cleanup of Critical and High-severity SCA vulnerabilities, achieving a **30% quarterly reduction** in third-party risk using **Checkmarx**.

Cloud Legion
Lead DevOps Engineer (Full-Time)
Remote
Sept 2023 - June 2025

Serving in a multifaceted capacity, spanning **architecture design, software development, DevOps engineering, and system administration**. I was responsible for simultaneously elevating the **team's technical skills** and ensuring the successful delivery of business requirements.

- **On-Premise Infrastructure:** Conducted on-premise infrastructure assessments and provided strategic consultation for hardware acquisition based on business requirements.
- **Virtualization & Containerization:** Managed and maintained Linux and Windows servers (using **Hyper-V** / **Proxmox**), along with virtual machines and containers (**LXC**, **Docker**).
- **Cluster Management:** Oversaw the administration of container orchestration clusters (**Docker Swarm**, **K3S**).
- **Network & Security Tooling:** Managed critical application infrastructure components, including **Kong** as an API Gateway, **Cloudflare WAF L7** for protection, and **Cloudflare Tunnels** for secure public access to applications.
- **Network Support:** Provided support to the network team, specifically utilizing **FortiNET** appliances.
- **CI/CD Implementation:** Implemented and maintained comprehensive pipelines in **Azure DevOps**, incorporating quality control steps (**Sonarqube** and various testing frameworks).
- **Microservice Templates:** Created standardized templates for microservices development (**Next.js**, **React**, **Node.js**) to accelerate development and ensure consistency.
- **Infrastructure Monitoring:** Maintained active infrastructure monitoring using **Netdata** and ensured application error tracking with **Sentry**.
- **Security & Uptime Monitoring:** Managed security monitoring (**Wazuh** for XDR/SIEM) and uptime checks (**UptimeKuma**).
- **Dashboard & Alerting:** Created comprehensive dashboards in **Sentry** and **UptimeKuma** to display application status and errors, configuring **webhooks and alerts** for infrastructure and cross-functional teams via Teams.
- **Team Leadership:** Led and mentored a DevOps team of **5+ individuals**.
- **Mentorship & Recruitment:** Responsible for training new personnel and participating in technical interviews.
- **Architectural Design:** Designed architectural solutions for the company, working directly with the **CISO, CTO**, and the client.
- **Client Management & Requirements:** Served as the technical liaison with clients, translating **business requirements** into concrete **technical specifications**.
- **Quality Documentation:** Created detailed documentation for processes and defined quality standards across the **Infrastructure, Development, and Testing** areas.

Incubator
Software Developer (Full-Time)
Remote
Dec 2021 - Ago 2023

- **Custom Solution Development:** Built and deployed custom software solutions (web, mobile, and backend) using technologies like **React, Next.js, NestJS, React Native, MongoDB, and AWS services**.
- **Requirements Gathering:** Managed direct client relationships to capture and translate business needs into technical specifications.
- **Impactful Delivery:** Delivered a successful **IoT smart parking control system** for the Tigre municipality, a case study that was later expanded to the city of Córdoba.

Projects

Homelab
March 2023 - Present

This project represents my space for continuous, day-to-day learning, where I have successfully implemented and maintained the following infrastructure to date.

- **Compute & Virtualization:** Managed a high-availability **Proxmox Cluster** across 3 MiniPCs (i7, Ryzen 3, N100), hosting ≈30 LXCs and various VMs. Ensured data integrity using **Proxmox Backup Server** with redundancy (3 on-site, 1 off-site backup locations).
- **Networking & Security:** Implemented comprehensive L2/L3 networking using **Mikrotik** (routing, DNS, internal firewall rules, and **VLANs**: Personal, Projects, Lab). Secured public services using **Cloudflare Zero Trust** tunnels, WAF rules, and secure remote access via **Wireguard VPN**.
- **Identity & Access Management:** Deployed a zero-trust model utilizing **Zoraxy** (L7 reverse proxy) and **Authelia** to enforce Multi-Factor Authentication (MFA) on applications without native login. Managed user identity with **lldap** federation.
- **Observability & Monitoring:** Established a full observability stack using **Grafana + Prometheus** for metrics, dashboards, and alerting. Integrated **Sentry** for error logging, **UptimeKuma** for service status, and **Wazuh** for XDR/SIEM capabilities.
- **Automation & DevOps (IaC):** Utilized **Terraform** and **Ansible** for Infrastructure as Code (IaC) provisioning. Managed CI/CD pipelines and version control using **GitHub Actions** and a local **Gitea** mirror. Automated internal processes via **N8N**.
- **Certificates & Data:** Managed automatic **Let's Encrypt** SSL certificate renewals for internal resources with Cloudflare DNS resolution. Provided personal file resources via **ownCloud**.

Mainhost
Game Server Hosting
July 2025 - Present

Mainhost is a **multi-game hosting platform** specializing in providing **free servers** for popular titles like **Minecraft** and **GTA Samp**. The service also features its own dedicated community servers for user engagement.

- **Full Product Lifecycle:** Handled the entire product development process, including coding, deployment, and executing the **marketing campaign** for user acquisition.
- **Continuous Improvement:** Implemented product enhancements and feature updates based on direct user feedback to improve the overall service quality.

https://mainhost.dyallab.com.ar/

Dyabox
Game Retro Store
July 2025 - Present

- **Retail Store:** IT supplies, video game consoles, and accessories for gamers.
- **Product Development:** Development of a proprietary retro console based on RetroPie.
